

Color Palette

A joyful, disciplined colour system

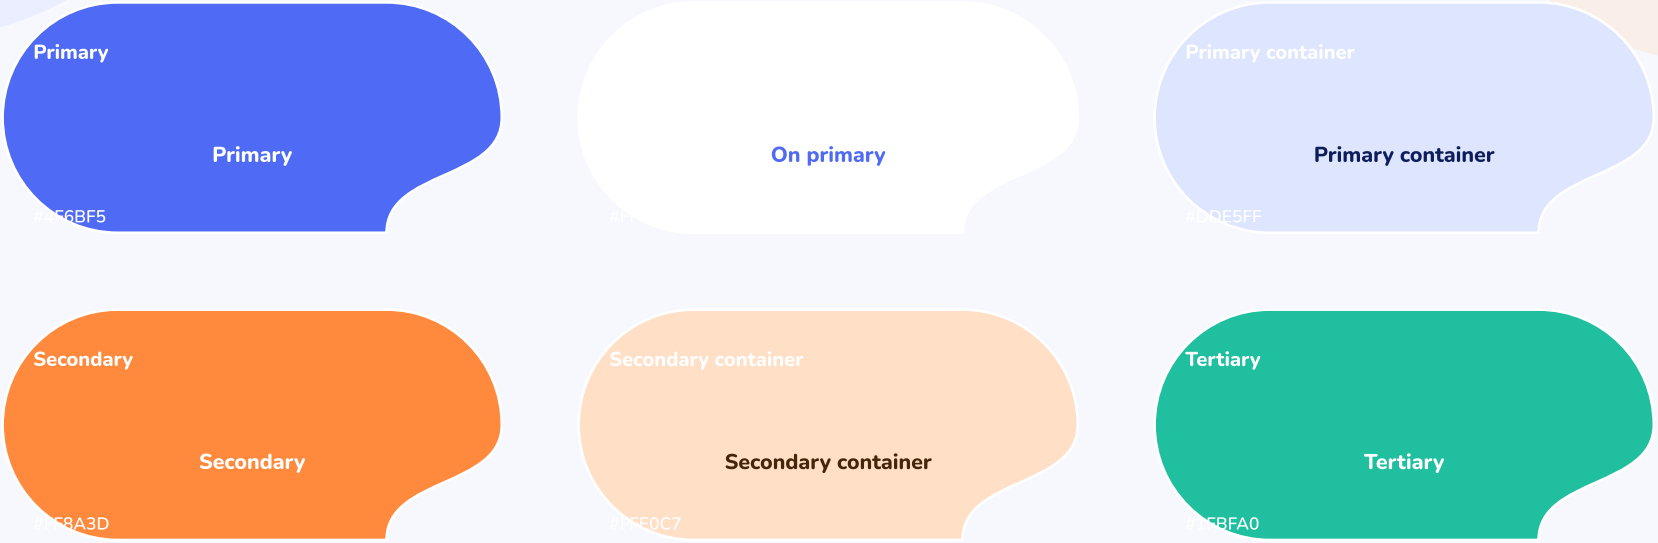

01 Brand Colours

The emotional core

Primary, secondary, tertiary

Used for actions, highlights and identity

Colour roles

How brand colours behave

Primary	Buttons, active nav, links, focus rings. The family trust colour – present on every screen.
Secondary	Child-mode actions, rewards, FABs. Warm orange signals “for kids”.
Tertiary	Verified states, success accents on brand surfaces. Teal “good” moments.
Containers	Soft tinted backgrounds for chips, icon badges and emphasised areas.

02

Accent Colours

Six playful helpers.

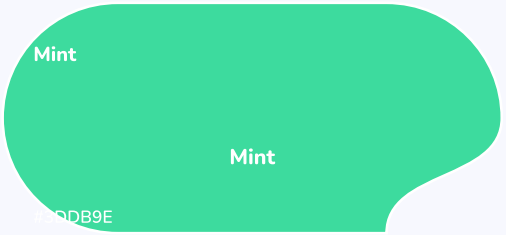

Accents

For child avatars, categories and delight

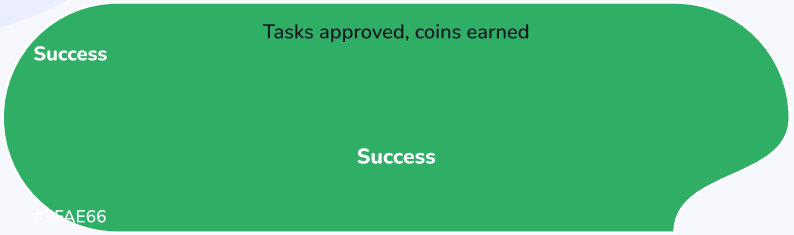

Accents are used sparingly for identity (child avatars), category icons and celebratory moments. Never more than three on one screen.

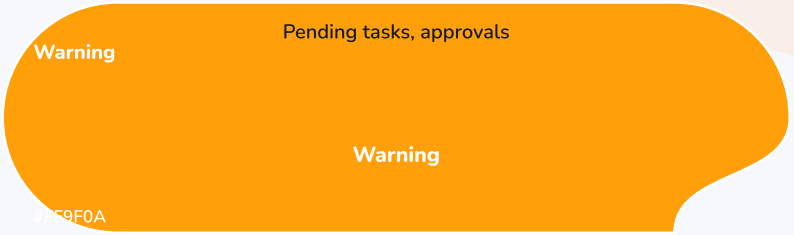

03 Semantic & Status

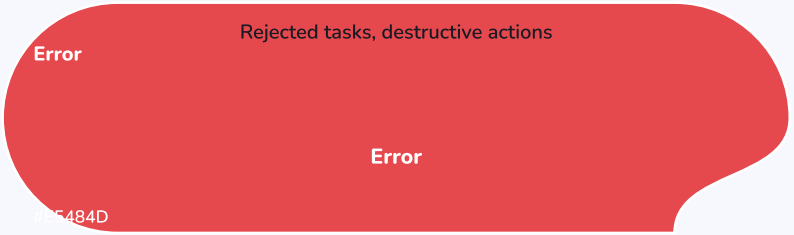

Feedback colours with meaning

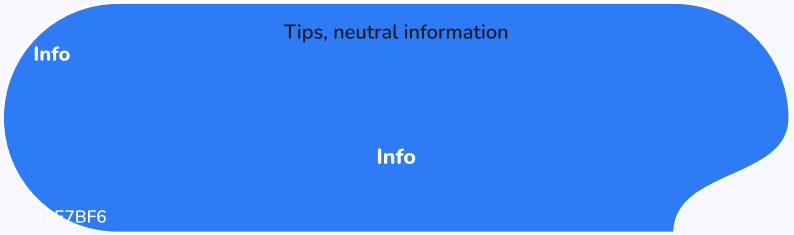

Semantic colours

Success, warning, error, info

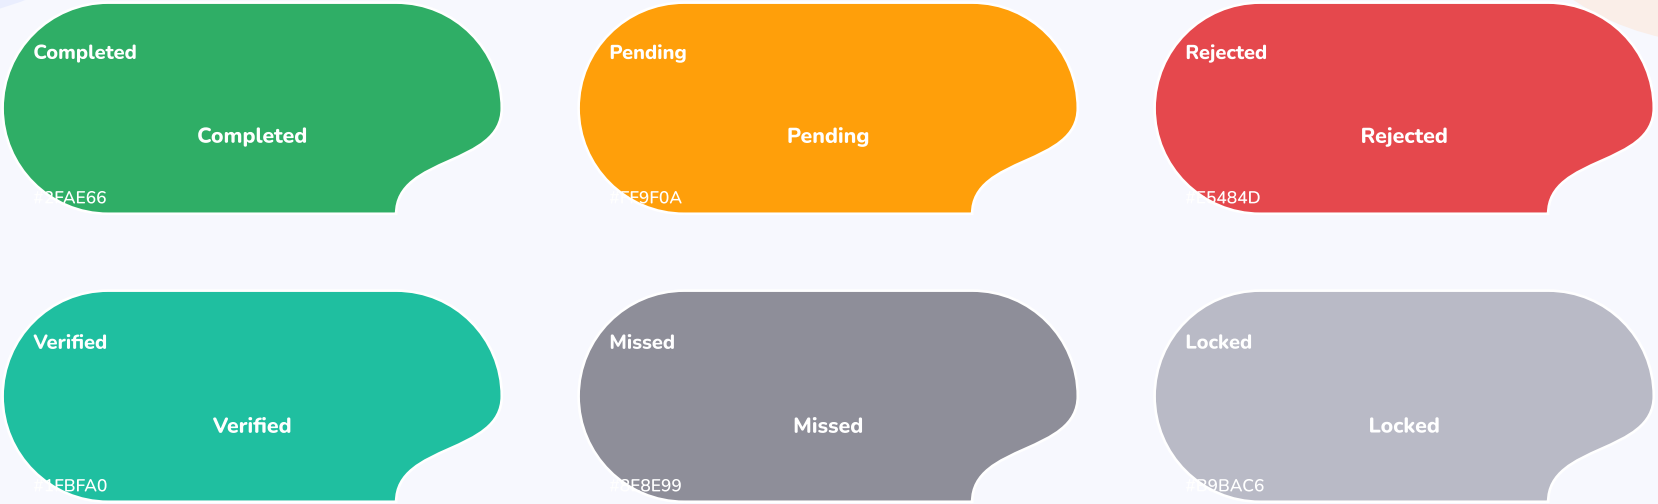

Task status colours

Six states, never colour alone

Every status pairs a colour chip with an icon and a label (e.g. a clock for Pending). This keeps the app usable with colour blindness or in greyscale.

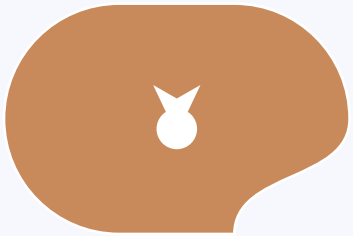

04 Badgers

Progress feels shiny.

Four achievement tiers

Bronze to diamond

Bronze

#C98A5B

Silver

#9AA4B5

Gold

#E8A500

Diamond

#3FB9E0

Badges in the same tier share one gold-to-diamond language. Tier colours never replace semantic colours.

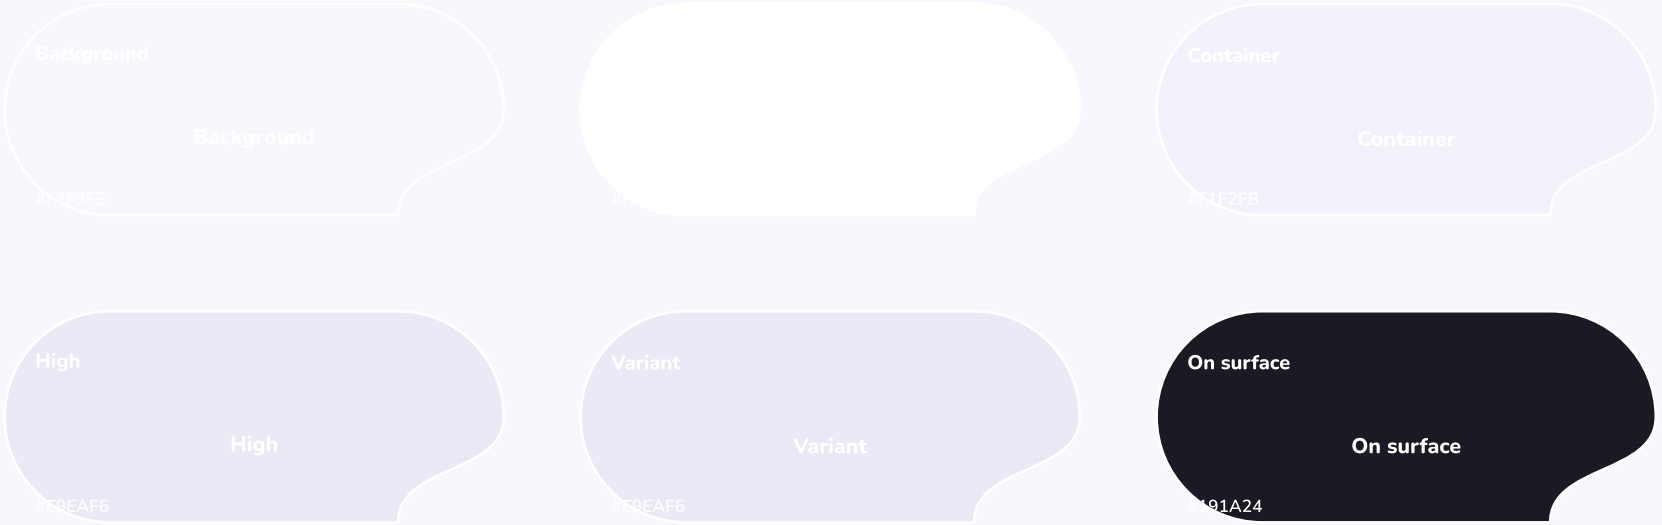

05 Surfaces & Dark Theme

The stage for the content

Light surfaces

Quiet backgrounds, crisp content

Cards sit on Surface; the screen rests on Background. A cool near-white keeps everything calm so brand colours can shine.

Dark surfaces

Same hues, night-safe luminance

06 Usage & Contrast

Colour discipline

Rules of thumb

60 / 30 / 10 and beyond

Proportion	60% neutrals, 30% brand, 10% accents on any screen.
Contrast	Body text needs 4.5:1; large display text 3:1. Never place brand blue text on brand blue.
Emotion	Green means good, red means stop – do not re-purpose semantic colours for decoration.
Dark mode	Use the dark token set; never lower accent brightness below 4.5:1 on dark surfaces.
Testing	Check every screen in greyscale and with a 2.0 colour-blind filter.
