

Responsive Guide

One app, every screen size

01
breakpoints
Three tiers, tablet-first

Breakpoint table

Width in dp

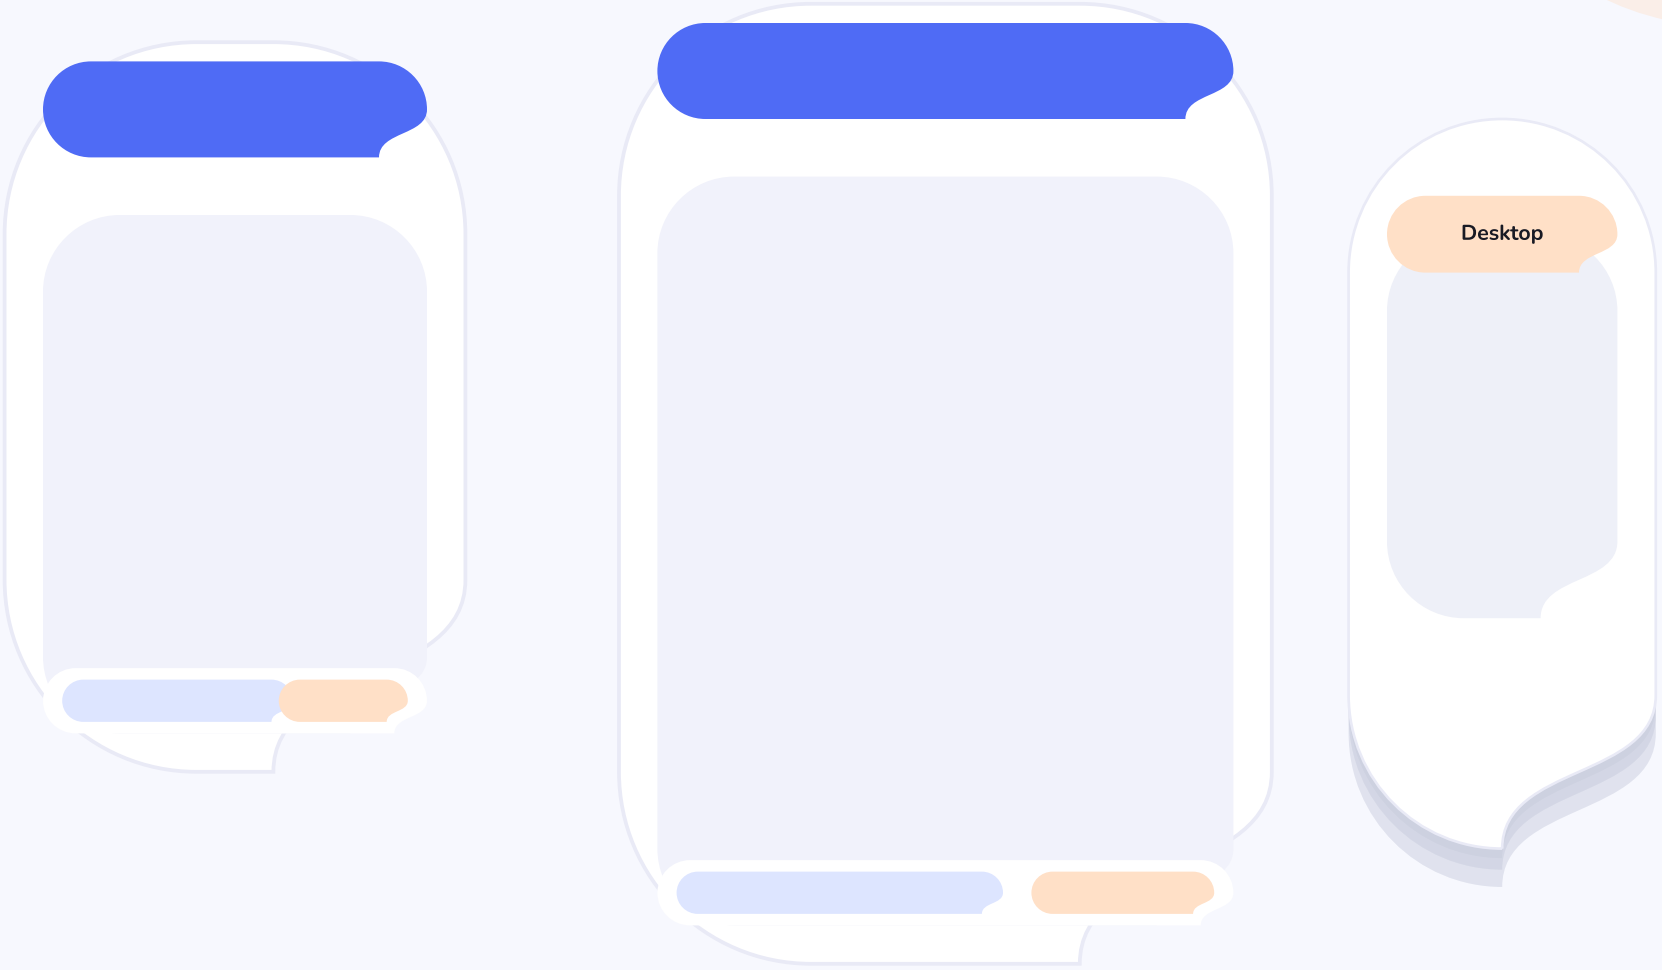

Compact		
< 600dp	**Phone portrait**	Single column, bottom nav condenses to 4 items, headers shrink.
Medium		
600 – 840dp	**Tablet portrait (primary)**	6-column grid, full child header, 5-item bottom nav.
Expanded		
> 840dp	**Tablet landscape & desktop**	12-column grid, side navigation optional, content max 880dp.

02 Layout

How screens reflow

Phone vs tablet

Same content, different rhythm

On phones the dashboard stacks vertically with a compact header. On tablet portrait content spreads across a 6-column grid; the reward grid goes 2×2. On

03 Spacing system

Consistent rhythm at every width

Column math

Margins and gutters scale with width

Compact < 600dp · 4 columns · margin 16 · gutter 12

Medium 600-840dp · 6 columns · margin 24 · gutter 16

Expanded > 840dp · 12 columns · margin 48 · gutter 16

04 Adaptive Components

Components that know the screen

What changes at each tier

The component playbook

5 items on tablet; 4 items with “More” on phone.

Full gradient + greeting on tablet; compact row on phone.

Rewards 2×2 on tablet; single column on phone; 3×2 on desktop.

Full charts on tablet; sparklines on phone with a “View report” link.

Cards cap at 360dp; centred on all tiers.

05 Best practices

Responsive hygiene

Rules to remember

Keep it simple at every size

- Design for the tablet portrait first, then scale down then up.
- Never hide important actions behind a size threshold – adapt, don’t remove.
- Use FluidContent with min/max so text wraps instead of truncating.
- Test at 320dp, 600dp, 800dp, 1024dp and 1280dp before releasing.
