

UI Style Guide

The visual language of Smart Child Hub

01 Principles

Four ideas shape every screen

Design principles

What we optimise for on every screen

Big rounded shapes, friendly mascot Sunny and warm colours make routines feel like games, never chores.

One primary action per screen. Big type and generous spacing mean a 4-year-old and a parent both understand instantly.

Safe

Parent-only zones sit behind a PIN. No accounts, no ads, no internet – a private family space.

Rewarding

Coins, badges and confetti celebrate every win and turn effort into visible, motivating progress.

02

Visual language

Rounded, soft, glassy, alive

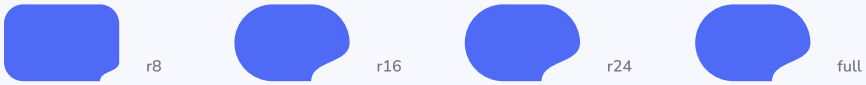

Shapes, depth and gradients

The signature Smart Child Hub look

Rounded geometry

Radii are generous and consistent: 16dp cards, 24dp hero cards,

Glass & soft shadows

Floating cards sit on soft indigo shadows (never black).

Brand gradients

Primary hero

Secondary

Sunshine accent

Gradients are used for hero surfaces, headers and celebrations. Body content always sits on flat, quiet surfaces so text stays readable.

03 Layout & Grid

An 8dp system, tablet-first

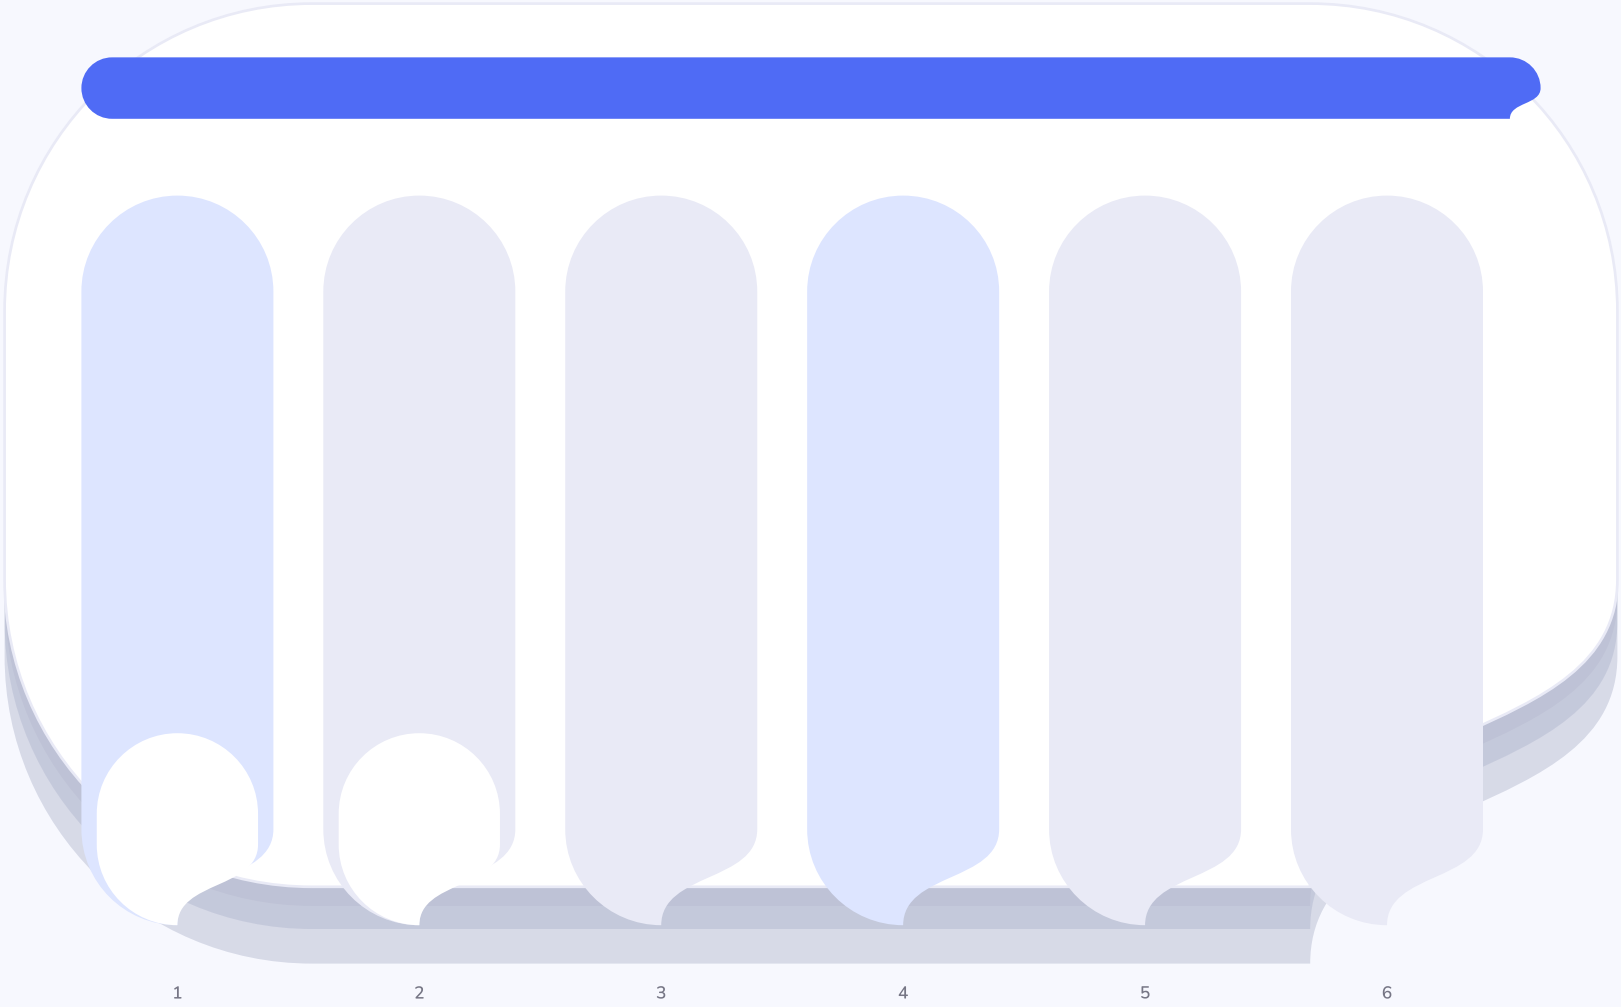

Layout tokens

The numbers behind every screen

Screen padding	24dp	All edges of the content area
Card padding	20dp	Inside cards, below titles
Grid gap	16dp	Between cards and columns
Grid columns	6 (medium) / 12 (expanded)	Tablet portrait and landscape
Content max width	880dp	Centred on very large screens
Touch target	48dp minimum	Never compromise tap targets
Bottom nav height	80dp	5 destinations, active pill
App bar height	64dp	Child gradient header / parent white

Grid in practice

Tablet portrait (primary target)

6-column grid · 24dp margins · 16dp gutters

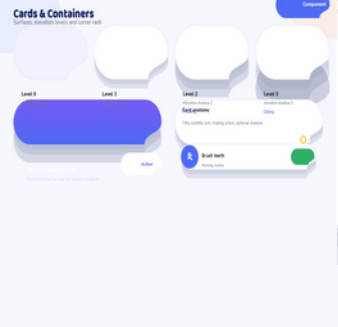

04 Components Overview

A small, consistent set

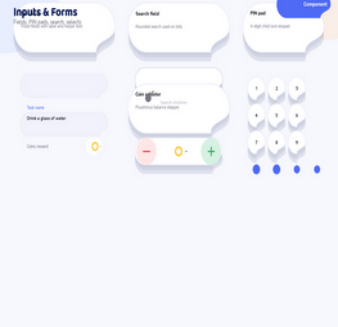

The building blocks

Full specs in the Component Library guide

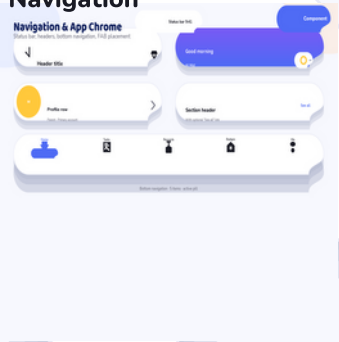

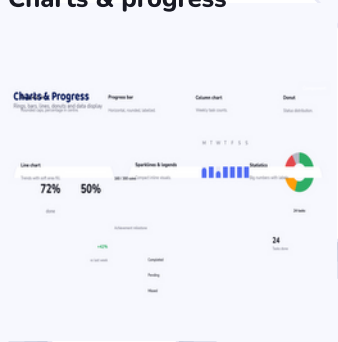

Navigation

Charts & progress

Dialogs & snackbars

Avatars & mascot

05 Feedback & States

Nothing is ever silent or stuck

Loading, empty, error, celebration

Four states every screen must handle

Loading

Three bouncing dots or a spinning coin with soft pulse. Under 400ms always.

Empty

Friendly illustration, short guidance, one clear next action.

Error

Warm message, no jargon, and a retry that actually works.

Celebration

Confetti, badges and coin flights reward every completed task.

06 Accessibility & Dark Mode

Inclusive by default

Contrast and touch

Minimums we commit to

Text contrast	4.5:1 for body text, 3:1 for large display type
Touch targets	48dp minimum, 24dp spacing between targets
Colour not alone	Statuses pair colour with icon and label
Type sizes	Body text never below 14sp; captions 12sp minimum
Reduce motion	Honour the system setting; disable confetti and springs

Dark theme

Night-friendly surfaces
